

Sustainable Urban Development through ART

We're committed to continuing our progress to make our activities more sustainable in support of achieving the **UN Sustainable Development Goals (SDGs)**.

We open up a dialogue with the Student Community to raise awareness on green issues coming up every day at the place we live, we work and walk.

On 28 September 2023, **Ms. Kseniya Gorbacheva**, Artist at 139 Documentary Center in Tashkent, delivered a community art workshop for our students, which took place at university Campus. The workshop was committed to the **United Nations Sustainable Development Goals (SDGs)**.

The workshop helped participants learn more about the concept of recycling and its global impact as well as provide information about the Sustainability Program at university.

SAVE THE ENVIRONMENT BY RECYCLING

Our future depends on what we do now.

Our university is not indifferent to global problems such as pollution of the environment, environmental damage of waste.

It is known that the environment is damaged by plastic bottles and harmful chemicals released from them. In order to prevent this problem, we have made our small contribution and launched a project to recycle plastic bottles. Now all plastic bottles in the campus are collected and sent to recycling plants.

Our students and teachers not only care about its territory, but also pays attention to city cleanliness and organizes projects like "**car-free day**", "**cleaning the city from garbage**" and so on.

Breaking barriers to achieve a clean world: **TRASH TO TREASURE.**

Small steps can add up to big changes. Let's all learn to reduce our ecological footprint and help maximize our Earth's precious resources.

As an institution with both local roots and global reach, sustainability is a key element of our responsibilities and values. We're committed to continuing our progress to make our activities more sustainable in support of achieving the **UN Sustainable Development Goals (SDGs)**.

TSUULL opens up a dialogue with the Student Community to raise awareness on green issues coming up every day at the place we live, we work and walk. In a project to recycle waste for getting new materials we looked at a variety of colorful up-cycled objects made from different materials and showed how discarded cardboard, aluminum and plastic can be used again to create a new object which is both durable and hard wearing.

Topilovich**

The Head of university facilities
management department

Participants will learn about the importance of waste reduction and what they can do to help. The workshop will challenge students, staff and the community to make a difference in the world by practicing waste recycling. In this workshop we will explore a number of topics as:

- *Human Impact*
- *Sustainability*
- *Green Economy*
- *Waste and Recycling*
- *STEM*
- *Pollution*
