

Water bottles and bags adapted for fertilizing and watering trees.

We care for the environment and pay a great attention to the trees in its yard by caring with different ways.

Fertilizing and watering trees are important tasks to ensure their health and growth. Additionally, different tree species may have specific requirements, so it's helpful to research or consult an arborist for more tailored advice.

Our university, together with **"NGO LN Techno PRODUCTION"**, organized special watering bags for each tree to keep them hydrated.

- ① **225 fruit trees**
- ② **150 small trees**
- ③ **450 pine trees**
- ④ **20 grape trees**

**TOTAL AREA OF
CAMPUS FIELD
2,10 hectares**

Trees are essential elements of university life due to their aesthetic appeal, positive impact on mental well-being, environmental benefits, support for biodiversity, educational opportunities, creation of social gathering spaces, and contribution to sustainability efforts.

From 25th October 400 trees are planned to plant in the university campus by academic staff and student's parents on a voluntary basis.

Each tree is attached to administrative and academic staff of university to be taken care of.
